shear-type ball bearing with induction-hardened, lubricated internal	
gear and pinion.	

Undercarriage:

Propel motors (one for each side) Axial-piston hydraulic motors with planetary drives. Hydraulic brake valve. Independent drive to each track permits counterrotation.

Canopy:

Walk-through canopy allows access to operator's station from either side. Canopy frame is a tip-over protective structure (TOPS) with steel roof for operator protection. Both right and left control stands can be locked to prevent unwanted actuation of digging functions. Adjustable vinyl seat, fore and aft.

Controls:

All hydraulic functions are actuated by low-effort direct acting controls. Two levers control swing, boom, arm and bucket functions. Right and left propel levers control forward, reverse and track counterrotation. A floor-mounted pedal controls boom swing. A lever to the right of the operator controls raising and lowering the blade.
