## Controls:

All hydraulic functions are pilot controlled for precise metering and low operator effort. Two adjustable levers control swing, boom, arm, and bucket functions. Right and left pedals control forward, reverse and counterrotation movements. All pilot controls are neutralized by a lever on the left console.

## Boom and Arm:

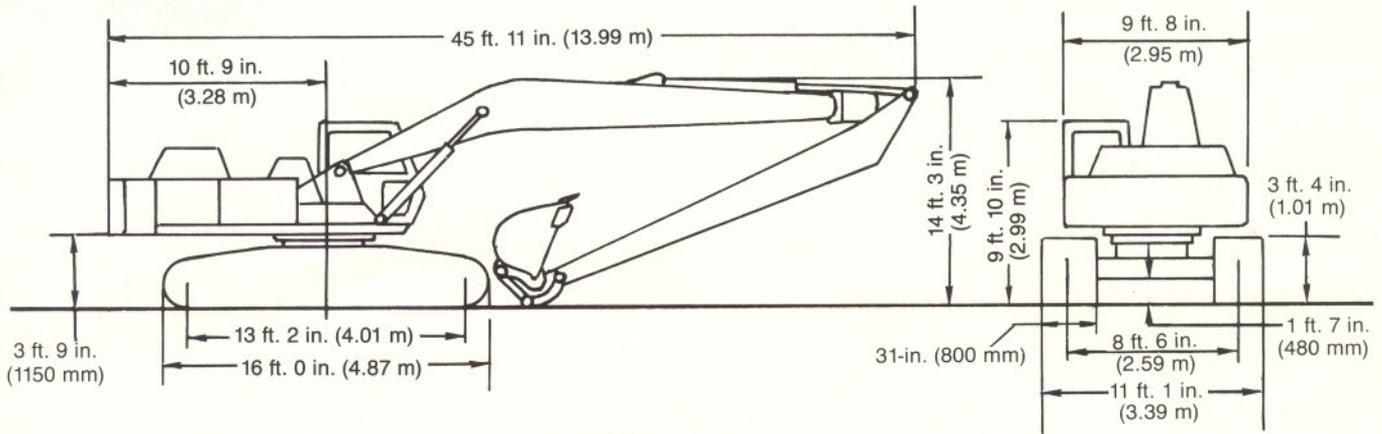

Internally reinforced tapered-box construction with heat-treated steel bushings. Pivot points are sealed to allow extended lubrication intervals. Machined and line-bored after welding for accurate alignment. Centralized lubrication system allows convenient servicing.

## Servicing and Vandal Protection:

Swingaway service doors expose built-in platforms and handrails. Hinged hood provides easy access to engine and hydraulic system. Cab and service access areas lock with the common ignition switch key. Optional lockable vandal covers available to protect all cab windows.

\*\*Contact your John Deere dealer for optimum bucket and attachment selection. The use of larger than recommended buckets in heavy materials and tough conditions should be carefully analyzed for digging force and load capacity. Bucket capacity indicated is SAE heaped.

Because of the additional digging reach and depth, machines equipped with the long front should be placed in a lighter duty work environment than units equipped with standard booms and arms. The long front is designed for dredging mud, silt and organic material from river or canal beds. The long front should not be used for general excavation work, especially in hard, dense material.
